

Getting Started on Visa Environment with Nuvepro

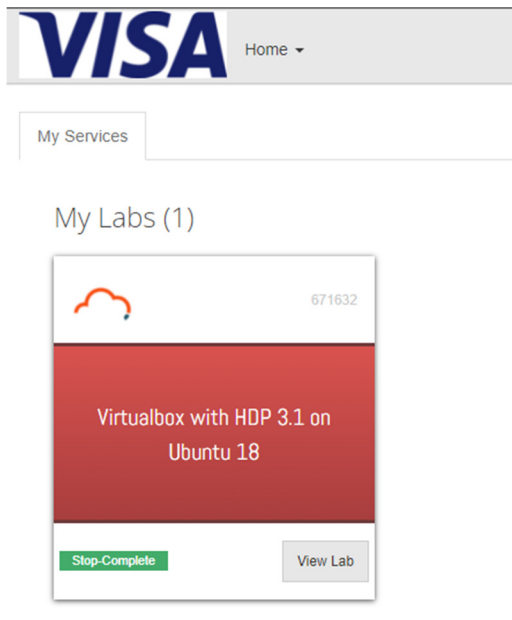

Follow the URL to login to the Visa System and access your Virtual Environment.

Use the **username** and **password** provided to you for the session.

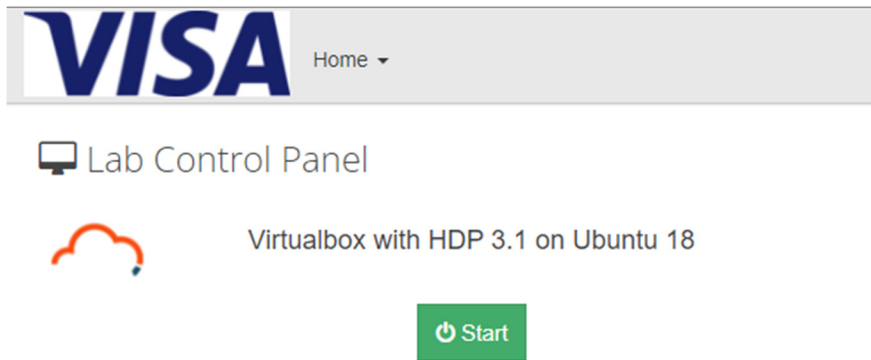

Once logged in successfully this brings you to the Visa startup to launch you Lab environment.

Click the **View Lab** button on the bottom of the Virtualbox with HDP 3.1 on Ubuntu 18 tab.

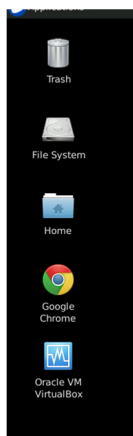

Next use the **Start** button  to launch the full Lab environment.

Once the lab environment is ready, click on the **Oracle Virtualbox** icon to start the HDP VM

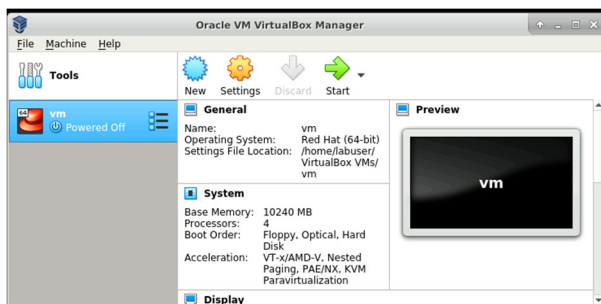

As seen here on the left-hand side of the **VM** window

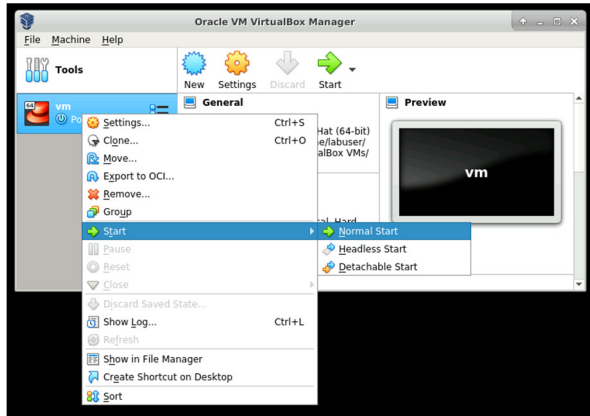

We will now power on the HDP VM by right-clicking on the button as shown here and the large image below.

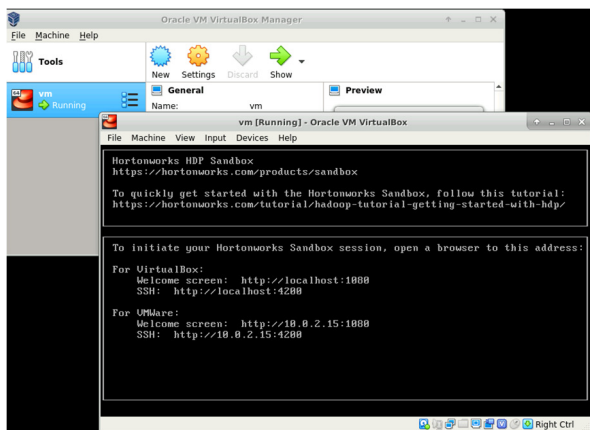

VM Powered Off

Use the **Start** menu item  and then select the **Normal Start** item  from the submenu.

This will start the **HDP VM** for use within the 4 labs.

Now open the **Google Chrome** browser from the main desktop icons to enter the labs.

The login is **wasadmin** and password is **wasadmin** - more details for this are found in the 4 Lab guides.
